### Honda Odyssey Rear Camber Arm

---

**Q1: There is an extra bracket in the kit, what is it for?**

**A1:** “Touring Elite” models of the Honda Odyssey need this bracket for mount the factory height sensor on the right rear of the vehicle. If your Odyssey doesn’t have a sensor hooked to the factory upper control arm, you do not need the bracket.

**Q2: I have a Touring Elite Odyssey, how do I mount the factory height sensor?**

**A2:** Your arm kit should have come with a mounting tab loose in the box. Dismantle the arm and sandwich it between the nut and adjuster on the outboard end of the arm in the appropriate orientation. The height sensor arm will then mount to this tab with the original hardware that attached it to the stock arm.

**Q3: My arm didn’t come with the tab and I need it for my Elite, what do I do?**

**A3:** Call SPC customer service and request a tab be sent directly to you or your installer.
