### Kia Soul - EZ Shim

**Q1:** I am installing an EZ Shim (TM) on a 2010 - 2013 Kia Soul. After the shim is installed there is a significant gap between the caliper and the caliper bracket. Can I remove the bracket? What should I do?

**A1:** The bracket you are referring to is called the guide plate. You may be tempted to remove it but don't. Simply use a spacer from SPC Kit # 75970 and install it between the plate and the caliper.
