MSS	5.002	Packaging Standard for Outside Processing	
Revision:	A	Issue New Standard	
Date:	30 Apr 14	Approved by:	R. Truswell, D. Campbell

Scope:

This specification is intended to cover the packaging requirements of parts for shipment to and from outside processing (e.g., heat-treating, plating or coating, etc.).

General Specifications:

1. All parts must be packaged in durable, reusable containers with adequate internal separation to ensure the delivery of the parts to and from the processor without damage.
2. SPC parts will normally be shipped in custom-built containers as pictured below

3. Some parts will be shipped in Euro crates as pictured below.

4. Layers of parts will be separated by corrugated cardboard or plywood.
5. Threaded parts should be protected with plastic mesh tubing.
6. Parts to be painted will be shipped with a sufficient quantity of paper or other wrapping material to be used to protect against damage to the finish on the return trip.
7. Lids will be screwed or strapped on as required to protect the loads.
8. All processed parts will be returned from suppliers packed as well or better (e.g. painted parts) than as received.
