

Truck Sleeve Selection Template

Q1: Where can I find templates for selecting and installing truck sleeves?

A1: We have attached templates on the next 2 pages for you to print out.

To use the charts determine the amount and direction of camber and caster correction needed after a zero degrees sleeve has been installed. The intersection of the lines drawn will be the correct sleeve size and position of the slot as viewed from the top. Example below on driver's side shows +1.25° camber and +1.25° caster will need a +1.75° sleeve in the 7:30 position.
